## MAINSTREAM ENGINEERING CORPORATION

# **Modular Refrigeration/Freezer Unit**

for insulated shipping containers

performance, reliability and ease of maintenance. Using a high-efficiency, environmentally safe

refrigerant, the MRU meets or exceeds all requirements for military heating and cooling.

- Straightforward and intuitive control panel
- Integrated LCD that simplifies temperature and defrost settings
- ▶ 18 LED status indicators and nine jumpers located on the PCB allow the user to override sensors and relays
- Wire harnesses are straightforward plug and play

- Brazing, soldering or wire splicing never required
- Continuous cyclical operation of 16,000 hours without critical failure
- Designed for maintenance or repair with common tools from standard military tool kits
- Mean Time Between Failure (MTBF) rate of 5,202 hours
- ▶ 20-year storage life without performance degradation

## MRU Value-Added Features

## **Designed for Military Environment**

The MRU was designed for the harsh military environment. The unit has been tested to MIL-STD-810F (e.g., salt-fog, sand-dust, high and low temperature storage, ground mobility and rail impact).

#### **Air Flow and Air Circulation**

Air is drawn into the evaporator so condensation is not sprayed onto the food inside the container. The conditioned air circulates radially from the evaporator compartment to provide more uniform air flow distribution and prevent air blockage.

### **Total Unit Modularity**

Every component can be replaced with common tools. Brazing, soldering or wire splicing is never required.

## **System Redundancy**

Component redundancy allows the MRU to operate even if a condensor fan, evaporator fan, fan capacitor or heater fails. Extra terminals are available on the relays if a contact pits and fails.

## **Energy Saver Option**

In freezer mode, an energy saver selection switch automatically operates the MRU longer during cooler periods of the day, such as the evening, to reduce power consumption.

## **Watertight Electronics**

The control box and wire harness connections are watertight to improve reliability and simplify cleaning. The entire unit can be hosed off to remove dirt and other contaminants.

#### **LED Diagnostics**

The MRU circuit board has 18 LED status indicators to simplify troubleshooting.

#### **Circuit Breakers**

The MRU uses re-settable circuit breakers; there are no fusible links or fuses.

#### **Jumper Ports**

PCB jumpers simplify diagnostics and allow a field override of the control board should the electronics fail.

#### **Black-out Control**

The black-out (lights out) feature can be used in tactical situations.

# Combined Suction Line Accumulator/Liquid Receiver with Sight Glass

The suction line accumulator is located inside the liquid receiver to improve cooling capacity and performance. The liquid receiver contains a refrigerant sight glass to simplify system charging.

#### **Simplified Control System**

The electrical control system can be quickly and easily tested with a multimeter. Electrical components can be replaced with common maintenance tools. The electrical circuit schematic is displayed on the side of the MRU to aid in troubleshooting and repair. The entire control box can be easily removed and replaced, if necessary.

#### **Ease of Installation**

No manual lifting is required. The MRU is designed to be installed and removed with a forklift.

## **MRU Specifications**

Physical			
Height	21.4 inches	54.3 cm	
Width	36.8 inches	93.3 cm	
Depth	38 inches	96.5 cm	
Weight	350 lbs	158.8 kg	
Electrical Power			
MRU-TQ1-404	120 VAC, single-phase, 60 H.	120 VAC, single-phase, 60 Hz	
MRU-TQ3-404	208 VAC, 3-phase, 50/60 Hz Y Connection w/Neutral		
Cooling Capacity			
MRU-TQ1-404	2,800 Btu/hr (820 W) at 0°F/100°F	6,600 Btu/hr (1,933 W) at 35°F/100°F	
MRU-TQ3-404	4,500 Btu/hr (1,318 W) at 0°F/100°F	9,000 Btu/hr (2,636 W) at 35°F/100°F	
Refrigerant	R-404A	6 lbs 6 oz	

**Setup Time:** The MRU can be installed in less than 60 minutes by two people and is operable by a soldier outfitted in all levels of Mission Oriented Protective Posture (MOPP) equipment. The MRU requires less than 60 minutes Mean Time To Repair (MTTR) including evacuation and recharging using standard commercial support and test equipment.
